JAPANESE SERIAL PUBLICATIONS IN THE NATIONAL AGRICULTURAL LIBRARY

For nearly a century the National Agricultural Library has continuously received Japanese publications. Today it maintains a Japanese collection of more than 1,100 serials and 5,000 monographs in biological and agricultural fields, which is believed to be one of the largest collections of its kind in the world. The current rapid scientific and technological progress in Japan makes it imperative to supply bibliographic access to these publications.

The present bibliography contains Japanese serials that are currently received or have been received at the National Agricultural Library. These include periodicals, documents and reports issued under a single title for an indefinite period of time, but do not include numbered monographic series with a separate title for each individual issue. A bibliography of Japanese monographs will be prepared in the future.

Most of the publications included in this bibliography deal with agricultural and biological sciences, agricultural economics and rural sociology, but a small number of serials on other topics closely related to agriculture, such as general economics, trade, transportation and a few industries, are also covered.

This bibliography is the third of a series prepared by the Library under a grant from the National Science Foundation. The first list, Communist Chinese Periodicals in the Agricultural Sciences (Library List No. 70), was issued in December 1960 in a preliminary form for a special symposium of the American Association for the Advancement of Science. A revised edition of the list will be prepared in the future to include addition acquisitions. The second bibliography was published in June 1961 under the title Communist Chinese Monographs in the USDA Library (Library List No. 71), covering 893 titles.

The present bibliography was compiled by Peter B. Schroeder with the assistance of Mildred A. Russell under the direction of Leslie T. C. Kuo. Acknowledgment is made of the advice and financial assistance received from the National Science Foundation. Criticisms and suggestions for improvement will be welcomed.

Foster E. Mohrhardt, Director
National Agricultural Library

EXPLANATORY NOTE

This bibliography is divided into four parts. Part I is a listing of publications covering more than one major subject. Examples are progress reports and general survey reports of the Ministry of Agriculture and Forestry and various local agencies and institutions in Japan proper and in the territories formerly under Japanese occupation. Titles in Part II are grouped by subject. Within each group in both Part I and Part II the items are arranged in alphabetical order of the titles. The following information is given for each of the publications:

1. Title in English romanization of the Hepburn system, in Japanese and in English translation. Translations originally supplied by the editors of the publications are indicated with quotation marks.
2. Frequency of publication where known.
3. Publisher in English translation.
4. Call number at the National Agricultural Library, except for the publications which are in the process of being cataloged.
5. In some cases, a brief annotation on the general nature and contents of the publication; changes, if any, of title and frequency; availability of English table of contents and resumes; and other pertinent information.
6. Holdings at the National Agricultural Library.

An alphabetic list of publications and a list of publishers comprise Part III and Part IV, respectively, of the bibliography.
